1,1,2-Trichloro-1,2,2-Trifluoroethane	ND	ND		1	0.00	20	07/05/2019 1906

LOQ = Limit of Quantitation
DL = Detection Limit
LOD = Limit of Detection

P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
ND = Not detected at or above the DL

N = Recovery is out of criteria
+ = RPD is out of criteria

Note: Calculations are performed before rounding to avoid round-off errors in calculated results

Client: RAMBOLL Cooler Inspected by/date: LKH / 06-26-2019 Lot #: UF26025

Means of receipt: ☐ SESI ☐ Client ☐ UPS ☑ FedEx ☐ Other: _____

☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA Chlorine Strip ID: NA Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: 19-611

3.4 / 3.4 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 5 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☑ Yes	☐ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☑ Yes	☐ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # _____

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA _____ were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA _____. Time of preservation NA _____. If more than one preservative is needed, please note in the comments below.

Sample(s) 005(2) _____ were received with bubbles >6 mm in diameter.

Samples(s) NA _____ were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA _____.

SR barcode labels applied by: MEC Date: 06-26-2019

Comments: WE RECEIVED 2 40ML HCL VIALS FOR TRIP BLANK THAT IS NOT LISTED ON THE COC.

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UF26052, 1 Groundwater Samples, 2 Water Samples

Data validation and usability assessment was conducted for data package UF26052 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-WB14D-190625	UF26052-001
CMR-190625-EB	UF26052-002
TB-26-20190625	UF26052-003

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of phenol. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all phenol results have been validated as estimated.

Blank Detections
During analysis, zinc, acetone, and bis(2-ethylhexyl)phthalate was detected in trip and method blank samples. This indicates a possible cross-contamination issue. Due to this, all low level detections should be evaluated for possible contamination bias. All zinc, acetone, and bis(2-ethylhexyl)phthalate results below the RL or below 5x the blank result have been validated as non-detect (U).

Hold Time
All samples were analyzed by the lab within their hold time requirements. However, due to QC issues during the initial analysis some samples were reanalyzed outside of hold time. While these out of hold time results are generally usable, the results within hold time should be used preferentially.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Attachment 1: Data Validation Summary Checklist

Inorganic Data Review Summary

SDG No. UF26052

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 1 GW, 2 Water

Reviewer Name R Huening

Completion Date July 16, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Zinc detected in equipment blank. Project sample detection of zinc validated as non-detect (U).
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with samples. No action taken.
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	Project sample detection of zinc validated as non-detect (U).

SDG No. UF26052

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 1 GW, 2 Water

Reviewer Name R Huening

Completion Date July 16, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	Samples rerun due to surrogates out of criteria. All results ND. In hold time results should be used preferentially.
Blanks	Acetone and bis(2-ethylhexyl)phthalate detected in blank sample(s). Project sample detections of acetone and bis(2-ethylhexyl)phthalate validated as non-detect (U).	No issues
Deuterated Monitoring Compound or Surrogate Spikes	No issues	No issues
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported, no action taken.	No MS/MSD results reported, no action taken.
Laboratory Control Sample	LCS out of high for acetone. See above. LCS out low for phenol. All phenol results validated as estimated (J, UJ).	No issues
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by the lab.	N/A
Other Non-conformances	No other non-conformances noted.	No other non-conformances noted.
Overall Assessment of Data	Project sample detections of acetone and bis(2-ethylhexyl)phthalate validated as non-detect (U). Phenol results validated as estimated (J, UJ).	No validation action warranted.

Case Narrative
Ramboll US Corporation
Lot Number: UF26052

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The laboratory control sample (LCS) associated with batch 21720 had acetone recovered above the acceptance limits. This could potentially result in a high bias on analytical results. There were no detections above the LOQ for this compound in the samples associated with this batch; therefore, data quality is not impacted.

Semivolatiles
The method blank associated with batch 21123 had bis(2-ethylhexyl)phthalate detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for bis(2-ethylhexyl)phthalate have been flagged with a “B” qualifier.

The LCS associated with batch 21123 had phenol recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Montana EPH
Samples -001 and -002 had surrogates recovered outside of the acceptnace limits. Both samples were re-extracted and re-analyzed outside of the holding time. A reduced initial volume was used for re-extraction due to insufficient sample volume; the reporting limits have been raised accordingly. Both sets of data are reported.

Client: Ramboll Cooler Inspected by/date: ETB / 6/26/19 Lot #: UF26052

Means of receipt: ☐ SESI ☐ Client ☐ UPS ☑ FedEx ☐ Other: _____

☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: 18-2225 Chlorine Strip ID: NA Tested by: ETB

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: NA

3.1 / 3.1 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 6 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☑ Yes	☐ No	☐ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 21552

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UF28032, 1 Groundwater Sample, 1 Water Sample

Data validation and usability assessment was conducted for data package UF28032 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-MW100-190626	UF28032-001
TB-28-20190627	UF28032-002

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of phenol. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all phenol results have been validated as estimated.

Blank Detections
During analysis, zinc, acetone, and bis(2-ethylhexyl)phthalate were detected in trip and method blank samples. This indicates a possible cross-contamination issue. Due to this, all low level detections should be evaluated for possible contamination bias. All zinc, acetone, and bis(2-ethylhexyl)phthalate results below the RL or below 5x the blank result have been validated as non-detect (U).

Hold Time
All samples were analyzed by the lab within their hold time requirements. However, due to QC issues during the initial analysis some samples were reanalyzed outside of hold time. While these out of hold time results are generally usable, the results within hold time should be used preferentially.

Calibration Range Exceedances
During analysis naphthalene was detected above the calibration range of the instrument. Results outside of calibration range are unreliable due to reduced accuracy. The sample was rerun at a dilution and naphthalene was then detected within range. The result within calibration range should be used for project purposes.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Attachment 1: Data Validation Summary Checklist

Inorganic Data Review Summary

SDG No. UF28032

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 1 GW, 1 Water

Reviewer Name R Huening

Completion Date July 16, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Zinc detected in method blank. Project sample detection of zinc validated as non-detect (U).
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with samples. No action taken.
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	Project sample detection of zinc validated as non-detect (U).

SDG No. UF28032

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 1 GW, 1 Water

Reviewer Name R Huening

Completion Date July 16, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	VOC analysis had naphthalene out of calibration range. Sample was rerun at dilution out of hold time. Naphthalene result from dilution was within range. Diluted result should be used though it is validated as estimated (J).	No issues
Blanks	Acetone and bis(2-ethylhexyl)phthalate detected in blank sample(s). Project sample detections of acetone and bis(2-ethylhexyl)phthalate validated as non-detect (U).	No issues
Deuterated Monitoring Compound or Surrogate Spikes	No issues	Surrogates out due to matrix interference, no action taken.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported, no action taken.	No MS/MSD results reported, no action taken.
Laboratory Control Sample	LCS out low for phenol. All phenol results validated as estimated (J, UJ).	No issues
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by the lab.	N/A
Other Non-conformances	No other non-conformances noted.	No other non-conformances noted.
Overall Assessment of Data	Project sample detections of acetone and bis(2-ethylhexyl)phthalate validated as non-detect (U). Phenol results validated as estimated (J, UJ). Project sample detection of naphthalene validated as estimated (J).	No validation action warranted.

SDG No. UF28032 **Site** Calumet Montana Refining

Laboratory Shealy Environmental **Number of Samples/Matrix** 1 GW, 1 Water

Reviewer Name R Huening **Completion Date** July 16, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
	Diluted naphthalene result should be used though it is validated as estimated (J).

Case Narrative
Ramboll US Corporation
Lot Number: UF28032

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
Sample -001 had naphthalene recovered above the instrument's calibration range in the initial analysis. A 5X dilution was analyzed outside of the 14-day holding time. Both sets of data are reported.

Semivolatiles
The method blank associated with batch 21123 had bis(2-ethylhexyl)phthalate detected at a concentration that was below the LOQ. There were no detections for this compound in the samples associated with this method blank.

The laboratory control sample (LCS) associated with batch 21123 had phenol recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Montana VPH
Sample -001 had naphthalene detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same times as naphthalene and MTBE, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS.

Sample -001 had surrogates recovered outside of the acceptance limits due to objective evidence of matrix interference.

Metals
The method blank associated with batch 21526 had zinc detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for zinc have been flagged with a “B” qualifier.

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UE17007, 8 Soil Samples, 2 Water Samples

Data validation and usability assessment was conducted for data package UE17007 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB06-4.5-5.0-190516	UE17007-001
CMR-EB06-6.25-6.75-190516	UE17007-002
CMR-EB07-0.0-1.0-190516	UE17007-003
CMR-EB07-5.25-5.75-190516	UE17007-004
CMR-EB07-7.5-8.0-190516	UE17007-005
TB-01-20190516	UE17007-006
CMR-EB05-6-7-190517	UE17007-007
CMR-EB05-11-12-190517	UE17007-008
CMR-EB09-6-7-190517	UE17007-009
TB-02-190517	UE17007-010

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples (where included)
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds

- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

MS/MSD Recoveries
For the VOC and SVOC analysis suites MS/MSD results were reported. Recoveries for many SVOCs were out of criteria. However, these out of criteria results were likely due to the very high native sample concentrations in the original sample that overwhelmed the spiked amounts. Due to this, the out of criteria recoveries do not represent a systematic matrix issue. No validation action warranted.

For MS/MSD results in the metals analysis antimony and arsenic recoveries were out of criteria low, indicating a possible low bias. Due to this possible low bias all arsenic and antimony results have been validated as estimated (J, UJ).

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of hexachlorocyclopentadiene. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all hexachlorocyclopentadiene results have been validated as estimated (UJ).

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Attachment 1: Data Validation Summary Checklist

Inorganic Data Review Summary

SDG No. UE17007

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 8 Soil, 2 Water

Reviewer Name R Huening

Completion Date July 9, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Chromium detected below the RL in method blank sample. All project sample detections were above the blank result and the RL, no action taken.
Matrix Spike/Matrix Spike Duplicate	Several recoveries out of criteria. Some analytes recovered high likely due to high parent sample concentrations. Antimony and arsenic recovered low. All antimony and arsenic results validated as estimated (J, UJ).
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other issues noted.
Overall Assessment of Data	All antimony and arsenic results validated as estimated (J, UJ).

SDG No. UE17007

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 8 Soil, 2 Water

Reviewer Name R Huening

Completion Date July 9, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	No issues
Blanks	SVOC di-n-butyl phthalate detected in method blank below the RL. No project detections, no action taken.	No issues
Deuterated Monitoring Compound or Surrogate Spikes	Several SVOC analysis surrogates out for samples with very high detections. No action taken.	Several surrogates out due to matrix issues. No action taken.
Matrix Spike/Matrix Spike Duplicate	Multiple SVOCs out of criteria in MS and MSD sample. Parent sample had very high detected results that cause detected MS/MSD results to be out of criteria or for non-detect results to recover high. No validation action warranted.	No MS/MSD results reported with samples. No action taken.
Laboratory Control Sample	Several SVOCs out of criteria with no detections. Hexachlorocyclopentadiene recovered low indicating low bias. All hexachlorocyclopentadiene results validated as estimated (UJ).	No issues
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by the lab.	N/A
Other Non-conformances	CCV high for VOC methyl acetate. Raised RLs for high concentration samples. No action taken.	No other non-conformances noted.
Overall Assessment of Data	All hexachlorocyclopentadiene results validated as estimated (UJ).	No validation action warranted.

Case Narrative
Ramboll US Corporation
Lot Number: UE17007

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W" qualifier

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

This report supersedes and replaces any prior reports issued under this lot number. The details of the applicable revisions are detailed in a Report Revision Notice provided under separate cover.

Volatiles
The continuing calibration verification (CCV) associated with sample -009 had methyl acetate recovered above the acceptance limits. This could potentially result in a high bias on analytical results. There were no detections for this compound in the associated samples; therefore, data quality is not impacted.

Sample -001 was analyzed via high level due to the sample matrix. The reporting limits have been raised accordingly.

Semiolatiles
The method blank associated with batch 17168 had di-n-butyl phthalate detected at a concentration that was below the LOQ. There were no detections for this compound in the samples associated with this method blank, negating the possibility of false positives or sample contamination. The laboratory control sample (LCS) associated with batch 17168 had bis(2-chloro-1-methylethyl)ether recovered above the acceptance limits. This could potentially result in a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

The LCS associated with batch 17168 had hexachlorocyclopentadiene recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

The matrix spike/matrix spike duplicate (MS/MSD) associated with sample -007 had multiple compounds recovered outside of the acceptance limits. Additionally, a number of RPDs exceeded the acceptance limit. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a

matrix effect.

Due to high detections for target compounds, samples -001, -002, -004, -005, -007, and -008 were diluted greater than 5X. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana VPH
Samples -002, -003, -004, -005, -007, -008, and -009 had multiple compounds detected in the VPH analysis above the LOQ. Naphthalene was detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same time as MTBE and naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS.

Samples -002, -003, -004, -005, -007, -008, and -009 had surrogates recovered outside of the acceptance limits due to objective evidence of matrix interference.

Metals
The method blank associated with batch 17180 had chromium detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for chromium have been flagged with a “B” qualifier.

The MS/MSD associated with sample -009 had multiple metals recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

MEMO

Date: **July 17, 2019**

To: **File**

From: **Rob Huening, Ramboll**

cc: **Daniel J Price, Ramboll**

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UE21018, 4 Soil Samples, 1 Water Sample

Data validation and usability assessment was conducted for data package UE21018 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB14-0.5-1.5-190520	UE21018-001
CMR-EB14-2.0-2.4-190520	UE21018-002
CMR-EB11-2.0-2.5-190520	UE21018-003
CMR-EB11-2.5-3.0-190520	UE21018-004
TB-03-20190520	UE21018-005

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Inorganic Data Review Summary

SDG No. UE21018

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 4 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 10, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Chromium detected in a method blank below the RL. All project sample detections were above the blank result and the RL, no action taken.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	No validation action warranted.

SDG No. UE21018

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 4 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 10, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	No issues
Blanks	No issues	No issues
Deuterated Monitoring Compound or Surrogate Spikes	SVOC surrogates out due to dilutions. No action taken.	Surrogates out on one sample likely due to high analyte concentrations. No action taken.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	No issues	No issues
Internal Standards	No issues	One sample had ISes out of criteria due to likely matrix effects. No action taken.
Tentatively Identified Compounds	No TICs identified by the lab.	N/A
Other Non-conformances	VOC methyl acetate CCV out of criteria high. No detections, no action taken.	No other non-conformances noted during analysis or review.
Overall Assessment of Data	No validation action warranted.	No validation action warranted.

Case Narrative
Ramboll US Corporation
Lot Number: UE21018

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W" qualifier

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

This report supersedes and replaces any prior reports issued under this lot number. The details of the applicable revisions are detailed in a Report Revision Notice provided under separate cover.

Volatiles
The continuing calibration verification (CCV) associated with samples -003 and -004 had methyl acetate recovered above the acceptance limits. This could potentially result in a high bias on analytical results. There were no detections for this compound in the associated samples; therefore, data quality is not impacted.

Sample -002 had surrogates recovered outside of the acceptance limits due to confirmed matrix interference. Sample -004 had surrogates recovered outside of the acceptance limits due to sample dilution.

Semivolatiles
Sample -004 diluted 10X due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Sample -001 was diluted 10X due to the sample matrix. The reporting limits have been raised accordingly.

Montana VPH
Sample -004 had multiple compounds detected in the VPH analysis above the LOQ. Naphthalene was detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same time as MTBE and naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS.

Sample -002 had internal standards recovered below the acceptance limits due to confirmed matrix

interference.

Sample -002 had surrogates recovered outside of the acceptance limits due to confirmed matrix interference.

Sample -004 was diluted due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Metals
The method blank associated with batch 175263 had chromium detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for chromium have been flagged with a “B” qualifier.

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: 19-611

3.3 / 3.3 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 6 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☐ No	☑ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼" or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote # NA

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

MEMO

Date: **July 17, 2019**

To: **File**

From: **Rob Huening, Ramboll**

cc: **Daniel J Price, Ramboll**

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UE22021, 3 Soil Samples, 1 Water Sample

Data validation and usability assessment was conducted for data package UE22021 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB02-0.5-1.0-190521	UE22021-001
CMR-EB02-5.5-6.0-190521	UE22021-002
CMR-EB02-5.5-6.0-190521-FD	UE22021-003
TB-04-20190507	UE22021-004

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

Field Duplicate Samples
One field duplicate sample was submitted with project samples in order to evaluate precision. In general analytes detected above the reporting limit showed acceptable precision. However, benzene, anthracene, fluorene, 2-methylnaphthalene, naphthalene, and C11-C22 aromatics had results with RPDs above 50% indicating a possible precision issue. Due to this, all detected benzene, anthracene, fluorene, 2-methylnaphthalene, naphthalene, and C11-C22 aromatics results were validated as estimated (J).

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Attachment 1: Data Validation Summary Checklist

Inorganic Data Review Summary

SDG No. UE22021

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 10, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Chromium detected in a method blank below the RL. All project sample detections were above the blank result and the RL, no action taken.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	No issues
Duplicate Samples	One field duplicate sample submitted. Results showed acceptable agreement.
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	No validation action warranted.

SDG No. UE22021

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 10, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	No issues
Blanks	No issues	No issues
Deuterated Monitoring Compound or Surrogate Spikes	SVOC surrogates out due to dilutions. No action taken.	Surrogates out on two samples likely due to high analyte concentrations. No action taken.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	No issues	No issues
Field Duplicates	One field duplicate submitted with samples. Detections showed acceptable agreement with the exception of benzene, anthracene, fluorene, 2-methylnaphthalene, and naphthalene which had RPDs above 50%. All benzene, anthracene, fluorene, 2-methylnaphthalene, and naphthalene results validated as estimated (J).	One field duplicate submitted with samples. Detections showed acceptable agreement with the exception of C11-C22 aromatics which had an RPD above 50%. All C11-C22 aromatics results validated as estimated (J).
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by the lab.	N/A
Other Non-conformances	No issues	No other non-conformances noted during analysis or review.

Report of Analysis

Ramboll US Corporation
333 West Wacker Drive
Suite 2700
Chicago, IL 60606
Attention: Michael Wilson

Project Name: CMR RIAIM East Rail

Project Number: 1690012344-003 Task 221

Lot Number:**UE22021**

Date Completed:06/06/2019
Revision Date: 06/10/2019

06/10/2019 1:44 PM
Approved and released by:
Project Manager: Kelly M. Nance

Shealy Environmental Services, Inc.
106 Vantage Point Drive West Columbia, SC 29172 (803) 791-9700 Fax (803) 791-9111 www.shealylab.com

Case Narrative
Ramboll US Corporation
Lot Number: UE22021

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W" qualifier

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

This report supersedes and replaces any prior reports issued under this lot number. The details of the applicable revisions are detailed in a Report Revision Notice provided under separate cover.

Semivolatiles
Samples -002 and -003 were diluted due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Sample -001 was diluted 10X due to the sample matrix. The reporting limits have been raised accordingly.

Montana EPH
Samples -002 and -003 had the surrogate 2-fluorobiphenyl recovered outside of the acceptance limits due to objective evidence of matrix interference.

Montana VPH
Samples -002 and -003 had multiple compounds detected in the VPH analysis above the LOQ. Naphthalene was detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same time as MTBE and naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS.

Samples -002 and -003 were diluted due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Metals
The method blank associated with batch 17534 had chromium detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for chromium have been

flagged with a “B” qualifier.

The matrix spike/matrix spike duplicate (MS/MSD) associated with sample -001 had multiple metals recovered outside of the acceptance limits. Additionally, the RPD for lead exceeded the acceptance limit. The laboratory control sample (LCS) was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

Sample Summary

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

MEMO

Date: **June 17, 2019**

To: **File**

From: **R Huening**

cc: **Daniel J Price, Ramboll**

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UE22029, 5 Groundwater Samples, 4 Water Samples

Data validation and usability assessment was conducted for data package UE22029 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB06-190516	UE22029-001
CMR-EB07-190516	UE22029-002
CMR-EB11-190520	UE22029-003
CMR-EB14-190520	UE22029-004
CMR-EB05-190521	UE22029-005
CMR-EB-01-20190521	UE22029-006
CMR-EB-02-20190521	UE22029-007
TB-05-20190516	UE22029-008
TB-06-20190516	UE22029-009

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance

- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

MS/MSD Recoveries
For the SVOC analysis suite MS/MSD results were reported. Recoveries were largely outside of criteria with the low recoveries indicating likely low bias. These out of criteria recoveries indicate a possible systemic bias to results. Therefore, ALL SVOC were flagged as estimated (J, UJ).

In the metals analysis beryllium recovered out of criteria low, indicating possible low bias. Therefore all beryllium results were validated as estimated (J, UJ).

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

Blank Detections
During analysis, bis(2-ethylhexyl)phthalate, naphthalene, and toluene were detected in trip, method, and/or equipment blank samples. This indicates a possible cross-contamination issue. Due to this, all low level detections should be evaluated for possible contamination bias. All bis(2-ethylhexyl)phthalate, naphthalene, and toluene results below the RL or below 5x the blank result have been validated as non-detect (U).

Sample Receipt Issues
The lab reported in the narrative that some samples arrived at the lab in broken containers. In order to complete analyses, sample media was taken from other sample containers to complete analysis. These results are usable though RLs had to be raised due to limited sample volume. No additional validation was warranted.

Hold Time
All samples were analyzed by the lab within their hold time requirements. However, due to QC issues during the initial analysis some samples were reanalyzed outside of hold time. While these out of hold time results are generally usable, the results within hold time should be used preferentially.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Preservation and Holding Times	No issues
Blanks	No issues
Matrix Spike/Matrix Spike Duplicate	MS/MSD results for beryllium out of criteria low. All beryllium results (all NDs) validated as estimated (UJ).
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	All beryllium results (all NDs) validated as estimated (UJ).

SDG No. UE22029

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 5 GW, 4 Water

Reviewer Name R Huening

Completion Date July 10, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	One sample had EPH bottles received broken. Spare SVOC bottle was used for analysis with raised RLs. No additional action taken.
Blanks	Bis(2-ethylhexyl)phthalate detected in equipment blank samples. Project sample detections of bis(2-ethylhexyl)phthalate validated as non-detect at the RL (U).	VPH naphthalene and toluene detected in equipment blank samples. All VPH toluene and naphthalene results below the RL validated as non-detect (U) at the RL.
Deuterated Monitoring Compound or Surrogate Spikes	Several surrogates out of criteria due to dilutions. No action taken.	Several surrogates out of criteria due to matrix interference. No action taken.
Matrix Spike/Matrix Spike Duplicate	MS/MSD sample pair had a high number (28) of analytes out of criteria with no obvious cause beyond matrix issues. ALL SVOC results validated as estimated (J, UJ).	No MS/MSD results reported with project samples. No action taken.
Laboratory Control Sample	SVOCs 2-clorophenol, 2,4-dinitrotoluene, 2,6-dinitrotoluene, 2-methylphenol, 2-nitroaniline, and phenol had LCS recoveries below criteria. See discussion above.	RPDs for C5-C8 aliphatics and MTBE out of criteria. No other QC issues, no action taken.
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by the lab.	N/A
Other Non-conformances	Several compounds were rerun at dilutions which led to raised RLs. Additional SVOC run done out of hold time on several samples due to QC issues. Both data sets are usable though the run within hold time should have preference.	No other issues noted or identified.

Case Narrative
Ramboll US Corporation
Lot Number: UE22029

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

This report supersedes and replaces any prior reports issued under this lot number. The details of the applicable revisions are detailed in a Report Revision Notice provided under separate cover.

Sample Receiving
Sample -007 was received with both 1L amber jars with HCl preservative for EPH analysis broken. One of the 250mL amber jars for semivolatiles analysis was preserved with HCL to pH <2 in the laboratory and used for EPH analysis. As a result, a reduced initial volume was used and the reporting limits have been raised accordingly.

Volatiles
Sample -001 was diluted 5X due to the sample matrix. The reporting limits have been raised accordingly.

Semivolatiles
The laboratory control sample (LCS) associated with batch 17674 had 2-clorophenol, 2,4-dinitrotoluene, 2,6-dinitrotoluene, 2-methylphenol, 2-nitroaniline, and phenol recovered below the acceptance limits. The matrix spike/matrix spike duplicate (MS/MSD) had multiple compounds recovered outside of the acceptance limits. Samples -001 and -007 had insufficient sample volume remaining for re-extraction and re-analysis. All other samples were re-extracted and re-analyzed outside of the holding time. The LCS associated with re-extract batch 18268 had 2,4-dinitrotoluene, 2,6-dinitrotoluene, di-n-octylphthalate, and bis(2-ethylhexyl)phthalate recovered below the acceptance limits. Both sets of data are reported.

Samples -001 and -002 were diluted 10X due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana VPH
The RPD for methyl tertiary butyl ether (MTBE) exceeded method control limits in batch 17877; however, all other criteria for this compound in the LCS/LCSD were within acceptance criteria and method control limits. The associated sample results were reported and no corrective action was required.

The RPD for C5-C8 Aliphatics exceeded method control limits in batch 17878; however, all other criteria for this compound in the LCS/LCSD were within acceptance criteria and method control limits. The

associated sample results were reported and no corrective action was required.

Samples -001, -002, -003, -004, and -005 had multiple compounds detected in the VPH analysis above the LOQ. Naphthalene was detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same time as MTBE and naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS.

Samples -001, -002, and -005 had surrogates recovered outside of the acceptance limits due to objective evidence of matrix interference.

Metals
The MS/MSD associated with sample -002 had beryllium recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

Sample Receipt Checklist (SRC)

Client: Ramboll Cooler Inspected by/date: ETB / 5/22/19 Lot #: UE22029

Means of receipt: ☐ SESI ☐ Client ☐ UPS ☑ FedEx ☐ Other: _____

☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: 18-2225 Chlorine Strip ID: NA Tested by: ETB

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: NA

3.1 / 3.1 °C 2.8 / 2.8 °C NA / NA °C NA / NA °C

Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 6 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☑ Yes	☐ No		10. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☐ Yes	☑ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)? _____
☑ Yes	☐ No		13. Was adequate sample volume available?
☐ Yes	☑ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☑ Yes	☐ No	☐ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH_3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☑ Yes	☐ No		21. Was the quote number listed on the container label? If yes, Quote # 21552

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA.
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is ***no***) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

SR barcode labels applied by: ETB Date: 5/22/19

Comments: -007 received two broken, 1L amber HCl bottles

MEMO

Date: **July 17, 2019**

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UF07044, 3 Soil Samples, 1 Water Sample

Data validation and usability assessment was conducted for data package UF07044 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB10-0.5-1.0-190606	UF07044-001
CMR-EB10-2.5-5.0-190606	UF07044-002
CMR-EB10-7.5-8.5-190606	UF07044-003
TB-07-20190606	UF07044-004

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

MS/MSD Recoveries
For the SVOC analysis suite MS/MSD results were reported to be almost universally out of criteria with extremely low recoveries. However, this is largely due to high native sample concentrations.. Due to this, the low recoveries do not represent a systematic matrix issue. No validation action warranted.

For metals analysis suites MS/MSD results were reported. Recoveries were largely within criteria with the exception of beryllium. These out of criteria recoveries indicate a possible low bias to results. Therefore, all beryllium results were flagged as estimated (J, UJ).

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of methylcyclohexane. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all methylcyclohexane detected results have been validated as estimated.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Attachment 1: Data Validation Summary Checklist

Inorganic Data Review Summary

SDG No. UF07044

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	No issues
Matrix Spike/Matrix Spike Duplicate	MS/MSD recoveries out for multiple analytes mostly due to high native sample concentrations. Beryyllium recovery low. All beryllium results validated as estimated (J, UJ).
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted.
Overall Assessment of Data	All beryllium results validated as estimated (J, UJ).

SDG No. UF07044

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	No issues
Blanks	Phenol detected in method blank. No project detections, no action taken.	No issues
Deuterated Monitoring Compound or Surrogate Spikes	Surrogates out due to sample dilutions. No action taken.	Surrogates out due to sample dilutions. No action taken.
Matrix Spike/Matrix Spike Duplicate	Multiple SVOCs out of criteria. COCs of concern out likely due to high native sample concentrations. Non-project COCs left as is. No action taken.	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	Methylcyclohexane out of criteria high with detections. All methylcyclohexane detected results validated as estimated (J).	No issues
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by the lab	N/A
Other Non-conformances	No other non-conformances noted during review.	No other non-conformances noted during review.
Overall Assessment of Data	All methylcyclohexane detected results validated as estimated (J).	No validation action warranted.

Case Narrative
Ramboll US Corporation
Lot Number: UF07044

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W" qualifier

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The laboratory control sample (LCS) associated with batches 19342 and 19821 had methylcyclohexane recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Sample -002 had surrogates recovered outside of the acceptance limits due to sample dilution. No corrective action was required, as dilutions may impact recovery accuracy.

Semivolatiles
The method blank associated with batch 19028 had phenol detected at a concentration that was above the LOQ. There were no detections for this compound in the samples associated with this method blank, negating the possibility of false positives or sample contamination. The matrix spike/matrix spike duplicate (MS/MSD) associated with sample -001 had multiple compounds recovered outside of the acceptance limits. Additionally, a number of RPDs exceeded the acceptance limit. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

Sample -002 was diluted 200X due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana VPH
Samples -001, -002, and -003 had multiple compounds detected in the VPH analysis above the LOQ. Naphthalene was detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same time as MTBE and naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not

compared to or adjusted based on results via 8260B GC/MS.

Sample -002 had surrogates recovered outside of the acceptance limits due to sample dilution. No corrective action was required, as dilutions may impact recovery accuracy.

Metals
The matrix spike/matrix spike duplicate (MS/MSD) associated with sample -001 had multiple metals recovered outside of the acceptance limits. Additionally, a number of RPDs exceeded the acceptance limit. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

Mercury	0.83	0.84		1	101	80-120	06/12/2019 1847

LOQ = Limit of Quantitation
DL = Detection Limit
LOD = Limit of Detection

P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
ND = Not detected at or above the DL

N = Recovery is out of criteria
+ = RPD is out of criteria

Note: Calculations are performed before rounding to avoid round-off errors in calculated results

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UF08028, 3 Soil Samples, 3 Water Samples

Data validation and usability assessment was conducted for data package UF08028 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB01-0.5-1.0-190607	UF08028-001
CMR-EB01-4.0-5.0-190607	UF08028-002
CMR-EB01-14.0-15.0-190607	UF08028-003
CMR-EB10-190606	UF08028-004
CMR-EB09-190607	UF08028-005
TB-08-20190606	UF08028-006

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

MS/MSD Recoveries
For the metals analysis suites MS/MSD results were reported. Recoveries were largely within criteria with the exception of antimony. These out of criteria recoveries indicate a possible bias to results. Therefore, all antimony results were flagged as estimated (J, UJ).

For the SVOC analysis suite MS/MSD results were reported to be almost universally in criteria with with the exception of some non-COC analytes. No validation action warranted.

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of methylcyclohexane and phenol. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all methylcyclohexane and phenol results have been validated as estimated.

Blank Detections
During analysis, zinc and bis(2-ethylhexyl)phthalate were detected in method blank samples. This indicates a possible cross-contamination issue. Due to this, all low level detections should be evaluated for possible contamination bias. All zinc and bis(2-ethylhexyl)phthalate results below the RL or below 5x the blank result have been validated as non-detect (U).

Sample Receipt Issues
The lab reported in the narrative that some samples arrived at the lab with pH values out of criteria. The lab adjusted the pH upon receipt and continued analysis as normal. No additional validation was warranted.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Inorganic Data Review Summary

SDG No. UF08028

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 2 GW, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Zinc detected in method blank below RL in aqueous analysis. All aqueous zinc results less than 5x the blank result validated as non-detect (U).
Matrix Spike/Matrix Spike Duplicate	MS/MSD recoveries out for multiple analytes mostly due to high native sample concentrations. Antimony recovery low. All antimony results validated as estimated (J, UJ).
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted.
Overall Assessment of Data	All antimony results validated as estimated (J, UJ). All aqueous zinc results less than 5x the blank result validated as non-detect (U).

SDG No. UF08028

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 2 GW, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	Two samples received with pH out of criteria. No action warranted.
Blanks	Bis(2-ethylhexyl)phthalate detected in method blank sample. All bis(2-ethylhexyl)phthalate detections validated as non-detect (U).	No issues
Deuterated Monitoring Compound or Surrogate Spikes	Surrogates out due to sample dilution. No action taken.	Surrogates out due to sample dilution. No action taken.
Matrix Spike/Matrix Spike Duplicate	Multiple SVOCs out of criteria in aqueous phase MS/MSD. Analytes were not site COCs. No action taken.	No MS/MSD results reported with samples. No action taken.
Laboratory Control Sample	Methylcyclohexane and phenol out of criteria. Methylcyclohexane detections validated as estimated (J).	No issues
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified	N/A
Other Non-conformances	No other non-conformances noted.	No other non-conformances noted.
Overall Assessment of Data	All bis(2-ethylhexyl)phthalate detections validated as non-detect (U). Methylcyclohexane detections validated as estimated (J).	No validation action warranted.

Case Narrative
Ramboll US Corporation
Lot Number: UF08028

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W" qualifier

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The laboratory control sample (LCS) associated with batch 19255 had methylcyclohexane recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Sample -002 had surrogates recovered outside of the acceptance limits due to sample dilution. No corrective action was required, as dilutions may impact recovery accuracy.

Semivolatiles
The method blank associated with batch 19057 had bis(2-ethylhexyl)phthalate detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for bis(2-ethylhexyl)phthalate have been flagged with a “B” qualifier.

The LCS associated with batch 19304 had phenol recovered above the acceptance limits. This could potentially result in a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

The matrix spike/matrix spike duplicate (MS/MSD) associated with sample -005 had multiple compounds recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

Samples -002 and -004 were diluted 100X due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana EPH
Samples -004 and -005 were not preserved to a pH<2, although samples were received in the correct sample containers and preservative. The pH was adjusted in the laboratory.

Montana VPH
Samples -001, -002, -004, and -005 had multiple compounds detected in the VPH analysis above the LOQ. Naphthalene was detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same time as MTBE and naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS.

Sample -001 had surrogates recovered outside of the acceptance limits due to objective evidence of matrix interference.

Sample -002 had surrogates recovered outside of the acceptance limits due to sample dilution. No corrective action was required, as dilutions may impact recovery accuracy.

Metals
The method blank associated with batch 19535 had zinc detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for zinc have been flagged with a “B” qualifier.

The MS/MSD associated with sample -001 had multiple metals recovered outside of the acceptance limits. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

MEMO

Date: **July 19, 2019**

To: **File**

From: **Rob Huening, Ramboll**

cc: **Daniel J Price, Ramboll**

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UF13022, 5 Soil Samples, 1 Water Sample

Data validation and usability assessment was conducted for data package UF13022 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB03-0.0-1.0-190612	UF13022-001
CMR-EB03-4.0-4.5-190612	UF13022-002
CMR-EB03-4.0-4.5-190612-Dup	UF13022-003
CMR-EB03-5.0-6.0-190612	UF13022-004
CMR-EB03-9.0-10.0-190612	UF13022-005
TB-09-20190612	UF13022-006

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of 1,1-DCA, trichlorofluoromethane, methylcyclohexane, and acetone. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all 1,1-DCA, trichlorofluoromethane, methylcyclohexane, and acetone results have been validated as estimated.

Field Duplicate Samples
One field duplicate sample was submitted with project samples in order to evaluate precision. In general analytes detected above the reporting limit showed acceptable precision. However, benzene, cyclohexane, TPH, C5-C8 aliphatics, and all SVOCs had results with RPDs above 50% indicating a possible precision issue. Due to this, all detected benzene, cyclohexane, TPH, C5-C8 aliphatics, and all SVOCs results were validated as estimated (J).

Blank Detections
During analysis, antimony, beryllium, and chromium were detected in equipment blank samples. This indicates a possible cross-contamination issue. Due to this, all low level detections should be evaluated for possible contamination bias. All antimony, beryllium, and chromium results below the RL or below 5x the blank result have been validated as non-detect (U).

Calibration Range Exceedances
During analysis benzene was detected above the calibration range of the instrument. Results outside of calibration range are unreliable due to reduced accuracy. The sample was rerun at a dilution and benzene was not detected. The result outside calibration range should be used for project purposes.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Inorganic Data Review Summary

SDG No. UF13022

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 5 GW, 1 Water

Reviewer Name R Huening

Completion Date July 11, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Antimony, beryllium, and chromium detected in equipment blank samples. All antimony, beryllium, and chromium project sample results less than the RL or 5x the blank result validated as non-detect (U) at the RL or sample result, whichever is higher.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	One field duplicate submitted. Results show acceptable agreement, no action taken.
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	All antimony, beryllium, and chromium project sample results less than the RL or 5x the blank result validated as non-detect (U) at the RL or sample result, whichever is higher.

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	No issues
Blanks	No issues	No issues
Deuterated Monitoring Compound or Surrogate Spikes	Several surrogates were out of criteria due to dilutions. No action taken.	Several surrogates were out of criteria due to dilutions. No action taken.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	Recoveries out for VOCs 1,1-DCA, trichlorofluoromethane, methylcyclohexane, and acetone and SVOCs hexachlorocyclopentadiene and 3-nitroaniline. RPDs out for multiple compounds. Hexachlorocyclopentadiene, acetone, and 3-nitroaniline biased low. All hexachlorocyclopentadiene, acetone, and 3-nitroaniline results validated as estimated (J, UJ). Methylcyclohexane biased high with detections. All methylcyclohexane detections validated as estimated (J).	No issues
Field Duplicates	One field duplicate submitted. All analytes show acceptable agreement with the exception of detected SVOCs, benzene (VOC), and cyclohexane. All detected SVOCs, benzene, and cyclohexane results validated as estimated (J).	One field duplicate submitted. All analytes except TPH and C5-C8 aliphatics showed acceptable agreement. All TPH and C5-C8 aliphatics detected results validated as estimated (J).
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by lab.	N/A

Case Narrative
Ramboll US Corporation
Lot Number: UF13022

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W" qualifier

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The laboratory control sample (LCS) associated with batches 19924 and 20121 had methylcyclohexane recovered marginally outside of the acceptance limits. The laboratory control sample duplicate (LCSD) associated with batch 20424 had acetone recovered marginally outside of the acceptance limits. Additionally, a number of RPDs exceeded the acceptance limit. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

The LCS associated with batch 20120 had 1,1-dichloroethene and trichlorotrifluoromethane recovered above the acceptance limits. This could potentially result in a high bias on analytical results. There were no detections for this compound in the samples associated with this batch; therefore, data quality is not impacted.

Sample -004 had surrogates recovered outside of the acceptance limits due to sample dilution.No corrective action was required, as high dilutions impact recovery accuracy.

Sample -002 had benzene detected above the instrument's calibration range. The sample was analzyed high level and benzene was not detected at that dilution. Both sets of data are reported.

Semivolatiles
The LCS associated with batch 19960 had hexachlorocylcopentadiene and 3-nitroaniline recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Sample -002 was diluted 50X due to the sample matrix. The reporting limits have been raised accordingly. The associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Samples -003 and -004 were diluted 50X due to high concentrations of target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana EPH
Sample -004 was diluted 5X due to high concentrations of the target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana VPH
Samples -002, -004, and -005 had multiple compounds detected in the VPH analysis above the LOQ. Naphthalene was detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same time as MTBE and naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS.

Samples -004 and -005 had surrogates recovered outside of the acceptance limits due to sample dilution. No corrective action was required, as high dilutions impact recovery accuracy.

Metals
The method blank associated with batch 20301 had antimony, beryllium, and chromium detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for these metals have been flagged with a “B” qualifier.

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

☐ Yes	☐ No	☑ NA	3. If temperature of any cooler exceeded 6.0°C, was Project Manager Notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC?
☑ Yes	☐ No		7. Were sample IDs listed on all sample containers?
☑ Yes	☐ No		8. Was collection date & time listed on the COC?
☑ Yes	☐ No		9. Was collection date & time listed on all sample containers?
☐ Yes	☑ No		10. Did all container label information (ID, date, time) agree with the COC? See comments
☑ Yes	☐ No		11. Were tests to be performed listed on the COC?
☑ Yes	☐ No		12. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		13. Was adequate sample volume available?
☑ Yes	☐ No		14. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☐ Yes	☑ No		15. Were any samples containers missing/excess (circle one) samples Not listed on COC?
☐ Yes	☑ No	☐ NA	16. For VOA and RSK-175 samples, were bubbles present >"pea-size" (¼" or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	17. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	18. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	19. Were all applicable NH3/TKN/cyanide/phenol/625 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☐ No	☑ NA	20. Were client remarks/requests (i.e. requested dilutions, MS/MSD designations, etc…) correctly transcribed from the COC into the comment section in LIMS?
☐ Yes	☑ No		21. Was the quote number listed on the container label? If yes, Quote #: NA

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA

Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L. (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Shealy ID: NA.

SR barcode labels applied by: JSH Date: 06/13/19

Comments: UF13022-004,-005 are recorded as aqueous on COC but samples are solid. Revised COC was provided by the client.

MEMO

Date: **July 19, 2019**

To: **File**

From: **Rob Huening, Ramboll**

cc: **Daniel J Price, Ramboll**

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UF14018, 3 Soil Samples, 1 Water Sample

Data validation and usability assessment was conducted for data package UF14018 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB04-0.0-1.0-190613	UF14018-001
CMR-EB04-4.0-5.0-190613	UF14018-002
CMR-EB04-8.0-8.5-190613	UF14018-003
TB-10-20190613	UF14018-004

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of methylcyclohexane, hexachlorocyclopentadiene, and 3-nitroaniline. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all methylcyclohexane, hexachlorocyclopentadiene, and 3-nitroaniline results have been validated as estimated.

Blank Detections
During analysis, antimnoy, beryllium, and chromium was detected in equipment blank samples. This indicates a possible cross-contamination issue. Due to this, all low level detections should be evaluated for possible contamination bias. All antimony, beryllium, and chromium results below the RL or below 5x the blank result have been validated as non-detect (U).

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Attachment 1: Data Validation Summary Checklist

Inorganic Data Review Summary

SDG No. UF14018

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Antimony, beryllium, and chromium detected in method blank sample. All antimony, beryllium, and chromium project sample results less than the RL or 5x the blank result validated as non-detect (U) at the RL or sample result, whichever is higher.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	All antimony, beryllium, and chromium project sample results less than the RL or 5x the blank result validated as non-detect (U) at the RL or sample result, whichever is higher.

SDG No. UF14018

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 3 Soil, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	No issues
Blanks	Acetone detected below the RL in the trip blank sample. Project sample detections above the RL, no action taken.	No issues
Deuterated Monitoring Compound or Surrogate Spikes	Several surrogates were out of criteria due to matrix issues. No action taken.	Several surrogates were out of criteria due to dilutions. No action taken.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	Recoveries out for methylcyclohexane, hexachlorocyclopentadiene, and 3-nitroaniline. Hexachlorocyclopentadiene, acetone, and 3-nitroaniline biased low. All hexachlorocyclopentadiene, acetone, and 3-nitroaniline results validated as estimated (J, UJ). Methylcyclohexane biased high with detections. All methylcyclohexane detections validated as estimated (J).	No issues
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by lab.	N/A
Other Non-conformances	No other non-conformances noted during review.	No other non-conformances noted during review.
Overall Assessment of Data	All methylcyclohexane detections validated as estimated (J). All hexachlorocyclopentadiene, acetone, and 3-nitroaniline results validated as estimated (J, UJ).	No validation action warranted.

Case Narrative
Ramboll US Corporation
Lot Number: UF14018

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

Where applicable, all soil sample analysis are reported on a dry weight basis unless flagged with a "W" qualifier

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The laboratory control sample (LCS) associated with batch 19822 had methylcyclohexane recovered marginally outside of the acceptance limits. The laboratory control sample duplicate (LCSD) associated with batch 20424 had acetone recovered marginally outside of the acceptance limits a number of RPDs exceeded the acceptance limits. The LCS associated with batch 20869 had methyl acetate recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Sample -001 had internal standards recovered below the acceptance limits due to confirmed matrix interference.

Sample -003 had surrogates recovered outside of the acceptance limits due to confirmed matrix interference.

Semivolatiles
The LCS associated with batch 19960 had hexachlorocyclopentadiene and 3-nitroaniline recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Sample -001 was diluted 10X due to the sample matrix. The reporting limits have been raised accordingly. The associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Due to high concentrations of target compounds, amples -002 and -003 were diluted 100X, 2500X and 20X, 500X, respectively. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana EPH
Samples -002 and -003 were diluted 10X and 5X, respectively, due to high concentrations of the target compounds. As a result, the associated surrogates were recovered outside of the acceptance limits. No corrective action was required, as dilutions of 5X and greater impact recovery accuracy.

Montana VPH
Samples -002 and -003 had naphthalene detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same times as naphthalene, making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS. Samples -002 and -003 had surrogates recovered outside of the acceptance limits due to objective evidence of matrix interference.

Metals
The method blank associated with batch 20301 had antimony, beryllium, and chromium detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for these metals have been flagged with a “B” qualifier.

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
H = Out of holding time
W = Reported on wet weight basis

MEMO

Date: **July 19, 2019**

To: **File**

From: **Rob Huening, Ramboll**

cc: **Daniel J Price, Ramboll**

Subject: **Calumet Montana Refining**
Data Usability Assessment
Methods 8260C, 8270, 6020A, MT EPH/VPH
SDG UF14020, 2 Groundwater Samples, 1 Water Sample

Data validation and usability assessment was conducted for data package UF14020 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA August 2014) and National Functional Guidelines for Superfund Inorganic Methods Data Review (USEPA August 2014). The following samples were reported in this data package:

Sample ID	Lab Sample ID
CMR-EB07-190613-GW	UF14020-001
CMR-EB14-190613-GW	UF14020-002
TB-11-20190613	UF14020-003

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Instrument Performance Check
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Field Duplicate Samples
- Laboratory Control Sample
- Internal Standards
- Tentatively Identified Compounds
- System Performance
- Overall Assessment of Data

QC criteria were met for each parameter with the following exceptions:

Surrogates/Internal Standards
Surrogates and/or internal standards were out of criteria for several samples analyzes. Surrogates out of criteria can indicate a possible accuracy bias. However, according to the lab narrative the recovery issues were likely due to sample dilutions or matrix effects. Therefore no results have been validated.

LCS/LCSD Recoveries
During analysis LCS/LCSD samples were run and recoveries were reported. These recoveries were largely in criteria with the exception of acetone. The out of criteria recoveries indicate a possible bias. Low recoveries indicate a possible low bias and high recoveries indicate a possible high bias. In general, high bias does not affect non-detect results. Based on the potential bias all acetone results have been validated as estimated.

Blank Detections
During analysis, zinc and bis(2-ethylhexyl)phthalate were detected in method blank samples. This indicates a possible cross-contamination issue. Due to this, all low level detections should be evaluated for possible contamination bias. All zinc and bis(2-ethylhexyl)phthalate results below the RL or below 5x the blank result have been validated as non-detect (U).

Hold Time
All samples were analyzed by the lab within their hold time requirements. However, due to QC issues during the initial analysis some samples were reanalyzed outside of hold time. While these out of hold time results are generally usable, the results within hold time should be used preferentially.

Overall Assessment of Data
Overall, data are acceptable and usable for project objectives. The laboratory flags (*, F1) to denote out of criteria results were removed. Several results were flagged J by the laboratory because the concentrations calculated were below the method reporting limit and above the laboratory detection limit. The J flag was retained. These results should be considered estimated as the calculated concentrations are below the instrument calibration range.

No additional validation actions were taken on project samples. Results are usable for project purposes as validated.

Inorganic Data Review Summary

SDG No. UF14020

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 2 GW, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	Metals (Modified Skinner List)
Preservation and Holding Times	No issues
Blanks	Zinc detected in method blank sample. All zinc project sample results less than the RL or 5x the blank result validated as non-detect (U) at the RL or sample result, whichever is higher.
Matrix Spike/Matrix Spike Duplicate	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	No issues
Duplicate Samples	No issues
Other Non-conformances	No other non-conformances noted during analysis.
Overall Assessment of Data	All zinc project sample results less than the RL or 5x the blank result validated as non-detect (U) at the RL or sample result, whichever is higher.

SDG No. UF14020

Site Calumet Montana Refining

Laboratory Shealy Environmental

Number of Samples/Matrix 2 GW, 1 Water

Reviewer Name R Huening

Completion Date July 12, 2019

Review Criteria	VOC 8260C, SVOC 8270	VPH/EPH
Preservation and Holding Times	No issues	One VPH/EPH sample reanalysed out of hold time with similar results. Both sets of results are usable.
Blanks	Bis(2-ethylhexyl)phthalate detected in method blank sample. All project sample detections of bis(2-ethylhexyl)phthalate validated as non-detect (U).	No issues
Deuterated Monitoring Compound or Surrogate Spikes	Several surrogates were out of criteria due to matrix issues. No action taken.	Several surrogates were out of criteria due to dilutions. No action taken.
Matrix Spike/Matrix Spike Duplicate	Several SVOC non-COC analytes recovered out of criteria. No action taken.	No MS/MSD results reported with sample results. No action taken.
Laboratory Control Sample	Recoveries out for acetone. Acetone results validated as estimated (J, UJ). Several SVOC non-COC analytes recovered out of criteria. No action taken.	No issues
Internal Standards	No issues	No issues
Tentatively Identified Compounds	No TICs identified by lab.	N/A
Other Non-conformances	No other non-conformances noted during review.	No other non-conformances noted during review.
Overall Assessment of Data	All project sample detections of bis(2-ethylhexyl)phthalate validated as non-detect (U). Recoveries out for acetone. Acetone results validated as estimated (J, UJ).	No validation action warranted.

Case Narrative
Ramboll US Corporation
Lot Number: UF14020

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the most current approved NELAC standards, the Shealy Environmental Services, Inc. ("Shealy") Quality Assurance Management Plan (QAMP), standard operating procedures (SOPs), and Shealy policies. Any exceptions to the NELAC standards, the QAMP, SOPs or policies are qualified on the results page or discussed below.

If you have any questions regarding this report please contact the Shealy Project Manager listed on the cover page.

Volatiles
The laboratory control sample duplicate (LCSD) associated with batch 20424 had acetone recovered marginally outside of the acceptance limits. Additionally, a number of RPDs exceeded the acceptance limit. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

Semivolatiles
The method blank associated with batch 19825 had bis(2-ethylhexyl)phthalate detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for bis(2-ethylhexyl)phthalate have been flagged with a “B” qualifier.

The laboratory control sample (LCS) associated with batch 19825 had 2-chlorophenol, 3+4-methylphenol, and N-nitrosdi-n-propylamine recovered marginally outside of the acceptance limits. Due to the large number of analytes in the LCS, there is a high statistical probability of a few analytes outside of control limits. Per SW-846 Update V 8000D- 23 Revision 4 July 2014, a number of analytes should be allowed to marginally fail the limits without requirement for corrective action. The laboratory's SOP allows for 10% of analytes to recover marginally outside criteria.

The matrix spike/matrix spike duplicate (MS/MSD) associated with sample -002 had multiple compounds and one surrogate recovered outside of the acceptance limits. Additionally, one RPD exceeded the acceptance limit. The LCS was recovered within the required acceptance limits; therefore, this likely demonstrates a matrix effect.

Montana EPH
Sample -002 had the surrogate recovered outside of the acceptance limits. The sample was re-extracted and re-analyzed outside of the holding time for confirmation. Both sets of data are reported.

Montana VPH
Sample -001 had naphthalene detected in the VPH analysis and confirmed via dual detector analysis (FID/PID). However, additional compounds elute at approximately the same times as naphthalene,

making it difficult for analysts to distinguish the target compounds from non-target compounds. Second method confirmation was performed via GC/MS analysis. The results via dual detection (FID/PID) were not compared to or adjusted based on results via 8260B GC/MS. Sample -001 had surrogates recovered outside of the acceptance limits due to objective evidence of matrix interference.

Metals
The method blank associated with batch 19719 had zinc detected at a concentration that was below the LOQ. All samples associated with this method blank that have detections for zinc have been flagged with a “B” qualifier.

1,2-Dichloroethane-d4		105	70-130
Bromofluorobenzene		106	70-130
Toluene-d8		101	70-130

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
